## BC-WIFI2CAN-000

## Wi-Fi CAN Interface

---

---

### Key Features

---

- WIFI2CAN Module can work in various modes (but not all simultaneously)
  - **2D Wi-Fi RealDash interface** where CAN bus data is sent wirelessly via Wi-Fi to a mobile device (PC, laptop, smartphone, tablet) for near-field live visualization data on freely configurable application (click [here](#) to download 2D Wi-Fi RealDash interface manual)
  - **Wireless *WinIt* 2D communication** to all 2D-CAN modules of a 2D system via Wi-Fi
  - **Interface module for receiving NTRIP correction data** for RTK-GPS functionality
  - **Socket server functionality** to exchange data between the interfaces Wi-Fi UART and CAN
  - **Wi-Fi bridge feature** to connect two can bus systems wirelessly through WIFI connection (two WIFI2CAN modules required!)
